For the year 2021

Part 2 Disclosure Details

1. Company History, Policy, Objective and Business Strategy Including Key Business Operation, Key Product and Key Services. Claim Processes and Customer Service Contact

1.1 Company History

On June 1st, 1951, Major Kuang Aphaiwong, PhrayaSrivisarnvaja, and Mr. Chin Sophonpanich established the Company named "Krungsiam Assurance Company Limited." The Company first focused on managing aid welfare. In 1977, Mr. Chin Sophonpanich had the foresight to see that the time was right for the Company to earnestly conduct life insurance business, and so commissioned the international consulting firm, IFCCA, working with Mr. Vai Vathanakul and Mr. K.V. Claridge, F.I.A., an actuarial science specialist from Swiss Reinsurance Company Ltd., to implement a new organizational structure and new systems. On January 1st 1979, Krungsiam Assurance Company Limited was renamed Bangkok Life Assurance Co., Ltd. Then, Bangkok Life Assurance Limited was registered as a public company (PCL) on September 25th, 2009

1.2 Policy, Objective and Business Strategy

1.2.1 Vision and Mission

Vision

"To make people realize the benefits of the life insurance and choose insurance coverage which is suitable for their financial position and value of life."

Mission

"The Company is determined to be a leader in establishing financial security for all groups of people and protecting their value of life by offering financial advice and impressive service through its sincere agents, partners and employees who are experts in the field."

1.2.2 Marketing and Competition

Please see details in the 56-1 One Report 2021, page 69, that is published on the Company's website as the follows:

https://www.bangkoklife.com/source/content/files/FINAL%20BLA%2056-1%20One%20Report%202021 EN.pdf

1.2.3 Life Insurance Business Trends 2022

Please see details in the 56-1 One Report 2021, page 74 - 75, that is published on the Company's website as the follows:

https://www.bangkoklife.com/source/content/files/FINAL%20BLA%2056-1%20One%20Report%202021_EN.pdf

1.2.4 Company's Strategy

The Company's strategy is to improve and massively develop the infrastructure and technology of our business, including operational management, service facilities, product development as well as a revamp of our distribution channels, business agility and efficiency. Adaptation must focus on and anticipate the expectations of our customers in the online world, while continue to promote our brand and enhance our corporate image. These will create a new

foundation and advanced platforms for future growth. On top of these, our enterprise risk management and the principles of good corporate governance are still the key strengths of the Company.

The company has made several strategic adjustments in order to maintain the company's potential and for future growth with stability and sustainability, for example:

- Developing new health products to cover all customer segments and needs so that customers can access products thoroughly. The company's health products provide coverage for illnesses caused by the coronavirus (Covid-19) that has spread heavily in the past year.
- Launching participating products and Unit Linked products
- Focusing on increasing the usage of tools for agents and financial advisors, such as Smart App that facilitates sales since product offering till premium payment. Also, adjusting the electronic application system to support digital face to face sales method. In the past year, the company has pushed forward the use of electronic applications (Smart Apps) to increase the efficiency of life insurance offerings during the coronavirus (Covid-19) epidemic, resulting in an increase in usage by up to 86% of the total number of applications.
- Adding new features on BLA Happy Life Mobile Application, which is a mobile application that customers can access the company's various services. Customers can check the network hospitals information, find suitable products, pay insurance premium, and redeem privileges. Also, promoting the use of digital services for customers to receive services quickly and conveniently, such as electronic policy (E-Policy), electronic premium receipt (E-Receipt), Electronic Policy Change Service (E-Pos), Electronic Claims Service (E-Claim), Non-cash payment service, Electronic policy loan service (E-loan), Electronic premium payment notification service (E-Notice) and Electronic endorsement service (E-Endorse). Customers can connect with the company without the need to travel to branches or head office.
- Preparing for cyber security by defining the information security policy as a framework for the company's operations. Also, increasing the security measures of information systems in order to meet information system security standards

1.3 Nature of Business Operation

Bangkok Life Assurance PCL has been running life insurance business and providing comprehensive financial planning services to customers. Life insurance is a means by which to mitigate loss among a certain group of people from unexpected incidents (death, loss of organs, disability, and loss of income). The benefits under policy conditions will be paid by the Company to victims or beneficiaries in order to mitigate his/her financial burden.

The Company has been improving its products to best cater for customer needs, which vary by their life stages and to provide them with the utmost benefits. Basically, life insurance provides two different types of main benefit to policyholders, which are life protection as a guarantee benefit upon death and saving benefit to enrich the policyholder's lives. Life insurance benefit will be paid to beneficiaries on policyholder's death and survival benefit will be paid to policyholder during the coverage period of the insurance contract.

The Company reinvests those premiums received in accordance with the investment policy framework. The investment ratio is allocated in line with the liability under the insurance contract and

the Company's risk policy and with a return on investment in accordance with the policy conditions guaranteed by the Company.

1.4 Product Characteristics, Core Services, and Premium Portion Categorized by Type of Products

Types of Life Insurance

The Company currently offers life insurance plans to meet the needs of customers that can be categorized into 3 types of products as follows:

1) Ordinary Life Insurance

Ordinary Life Insurance offers a life protection or saving for an individual policyholder. The company promises to pay the benefits according to the contract details as long as the contract remains in force. The product types are further classified and summarized as follows:

- **(1) Whole Life Insurance** promises a lump-sum payout to the beneficiary/policyholder in the event of death or attaining certain age (normally 90 or 99 years old) of the insured. This product type offers a protection against unexpected death of the insured.
- **(2) Pension** promises a series of payments payable monthly or yearly once the policyholder attains his/her retirement age (normally 55 or 60 years old) specified in the contract until the age of 85. This product type offers a protection against longevity risk: the risk of having no income after the retirement age.
- **(3) Term Life Insurance** promises a lump-sum payout in the event of the insured's death which occurs within a specific period to a beneficiary. This product type has a very low premium rate compared to the benefit promised and is suitable for those who look for a death protection for a limited time.
- **(4) Endowment Insurance** promises a lump-sum payout or a series of payments when the insured dies within a specific term or survives at the end of the contract term. This product type has a variety of premium terms e.g., BLA Happy Saving 14/7 (14 years protection term/ 7 years premium term). Generally, this product type is used for saving purposes.
- **(5) Unit-linked** offers both life coverage and returns from the investments in mutual funds. The returns are, thus, non-guaranteed by the company. This product type is suitable for policyholder who would like flexibility in the benefit amount, premium payments and mutual fund investments. However, investing in mutual funds and unit trust involves risks. The policyholder should be adequately aware of the nature of the investment and prepared for the event that loss is made.
- **(6) Rider Contract** is attached to the main contract to provide additional coverages such as in the events of accidents, total permanent disability, health benefit, daily hospitalization compensation or critical illness.

2) **Group Life Insurance**

Group Insurance Contract covers a group of people. Generally, the contract is arranged for the employees of a particular employer as a form of corporate welfare benefits. The underwriting policy will take into account the risk factor (such as age, gender, occupation, job characteristics and sum assured) of the whole group. Group insurance premium rates in general would be lower than those of Ordinary Insurance. The contract is renewable annually; therefore, the premium rate, benefits covered and the conditions may vary subject to changes in market conditions and risk factors.

3) Mortgage Insurance

Mortgage Insurance is a term life insurance that will pay, in general cases, a decreasing lump sum in the event of death and/or total permanent disability of the policyholder within a specified period. The decreasing sum assured is consistent with the nature of decreasing mortgage balance of the policyholder. The benefits from the policy may be used to close the debt balance in case of the policyholder's unexpected death.

Corporate Governance Handbook

คู่มือบรรษัทภิบาล update CG Code.pdf (bangkoklife.com)

2.4 Sub-Committees

For effective governance and so as to ensure that it is thoroughly informed on important matters, the Board of Directors appoints Directors with the relevant expertise to 7 subcommittees, which are Executive Board of Directors, Investment Committee, Audit Committee, Risk Management Committee, Nomination and Remuneration Committee, Good Corporate Governance Committee, and Performance Assessment and Evaluation Committee. Each committee has authority, duties, and responsibilities approved by the Board of Directors. Please see 56-1 One Report 2021, page 174-177, that is published on the Company's website as follows:

https://www.bangkoklife.com/source/content/files/FINAL%20BLA%2056-1%20One%20Report%202021 EN.pdf

2.5 Nomination and Appointment of Directors, Independent Directors and Executives 2.5.1 Selection of Directors and Tenure

Please see "Selection of Directors and Tenure" in the 56-1 One Report 2021, page 182, which is published on the Company's website as follows:

https://www.bangkoklife.com/source/content/files/FINAL%20BLA%2056-1%20One%20Report%202021 EN.pdf

2.5.2 Nomination of Independent Directors

For the appointment of independent directors, the Nomination and Remuneration Committee will propose candidates who are independent directors according to the Company's definition, in compliance with good corporate governance principles of the Stock Exchange of Thailand and the requirements of the Capital Market Supervisory Board. The committee consists of at least one third of the total number of directors, but no less than 3 persons. The nominated candidates are proposed to the Board of Directors and are proposed to the shareholders' meeting for appointment.

Qualifications of Independent Directors

- (1) Must hold no more than 1% of total voting shares of the Company, its subsidiaries, affiliates, major shareholders, or persons with controlling power. This includes shares held by their related persons.
- (2) Neither being nor used to be an executive director, employee, staff member, advisor who receives a salary, or is a controlling person of the Company, its parent company, subsidiaries, affiliates, same-level subsidiary companies, major shareholders or controlling persons, unless the foregoing status has ended for at least 2 years.
- (3) Not being a person related by blood or legal registration as a father, mother, spouse, sibling, and child, including spouse of child of other executives, major shareholders, controlling persons, or persons to be nominated as executives or controlling persons of the Company or its subsidiary companies.
- (4) Neither having nor used to have a business relationship with the Company, its parent company, subsidiaries, affiliates, major shareholders or controlling persons, in the manner which may interfere with his/her independent decision, and neither being nor used to be a significant shareholder or controlling person of any person having a business relationship with the Company, its parent company, subsidiaries, affiliates, major shareholders or controlling persons, unless the foregoing relationship has ended for at least 2 years.
- (5) Neither being nor used to be an auditor of the Company, its parent company, subsidiaries, affiliates, major shareholders or controlling persons, and not being a significant shareholder, controlling person, or partner of an audit firm which employs auditors of the Company, its parent company, subsidiary companies, affiliates, major shareholders or controlling persons, unless the foregoing relationship has ended for at least 2 years.
- (6) Neither being nor used to be a provider of any professional services including those as a legal advisor or a financial advisor who receives service fees exceeding 2 million baht per year from the Company, its parent company, subsidiaries, affiliates, major shareholders or controlling persons, and not being a significant shareholder, controlling person or partner of the provider of professional services, unless the foregoing relationship has ended for at least 2 years.

- (7) Not being a director appointed as representative of directors of the Company, major shareholders or shareholders who are related to major shareholders.
- (8) Not conducting any business in the same nature and in competition with the business of the Company or subsidiary companies or not being a significant partner in a partnership or being an executive director, employee, staff, advisor who receives a salary or holds shares exceeding 1 percent of the total number of shares with voting rights of other companies which conduct business in the same nature and in competition with the business of the Company or its subsidiary companies.
- (9) Not having any other characteristics which prevent them from expressing independent opinions with regard to the Company's business operations.
- (10) Not found guilty by court ruling in connection with violation of the securities and exchange law, the financial institution law, the life insurance law, the non-life insurance law, the anti-money laundering law, or any other financial business laws regardless of whether such laws are local or foreign, and not found guilty in connection with unfair acts concerning securities trading that fall under embezzlement, fraud, or corruption.

2.5.3 Selection of Executive Officers

Please see "Selection of Executive Officers" in the 56-1 One Report 2021, page 182, and Corporate Governance Handbook, page 23 which is published on the Company's website as follows:

Corporate Governance Handbook

คู่มือบรรษัทภิบาล update CG Code.pdf (bangkoklife.com)

2.6 Remuneration Policy

Please see "Remuneration of Directors and Executives" in the 56-1 One Report 2021, page 185-186, which is published on the Company's website as follows:

https://www.bangkoklife.com/source/content/files/FINAL%20BLA%2056-1%20One%20Report%202021 EN.pdf

3. Enterprise Risk Management (ERM) and Asset Liability Management (ALM)

3.1 Enterprise Risk Management: ERM

The Company has established risk management throughout the organization by using the risk management principles according to the international standard ERM (Enterprise Risk Management) as a guideline. To ensure that the Company operates the business under the appropriate level of Capital Adequacy and Capital management efficiency, the Company has complied with the principles of risk assessment and financial stability of ORSA (Own Risk and Solvency Assessment), in line with minimum risk management to create value added and maximize benefits for all sectors of the organization.

Risk Management policy

The Company has established systematic Enterprise Risk Management consistent with international standards for the comprehensive management of major activities and all risk types through a set of processes. These include identification of risk factors and causes, assessment,

analysis, prioritization, management, monitoring, and evaluation of risk management in order to make the corporate operations achieve the business objectives and goals, and to be in line with the defined risk appetite.

Governance structure for risk management

The Company has established a risk management structure and internal control according to the international standard of good governance practice to ensure that the Company has effective risk management and an independent assessment. The Company has also established a risk governance structure along with the scope of responsibilities, duties and participation in developing risk management for all departments by dividing the responsibility of risk management according to the Three Lines of Defense principle as follows:

- **1. 1st Line of Defense:** those who are directly responsible for managing and controlling risks, called Risk Owner / Business Line by following the guidelines of risk management that are supported and in accordance with the plans of each department. This group consists of the Board of Directors, Executive Board of Directors, Investment Committee, President, executive management from all departments, employees in the organization and various working groups appointed by the Company.
- **2. 2nd Line of Defense:** those who are responsible for overseeing and controlling the effectiveness of risk management (risk oversight / risk function), setting policy frameworks and risk management processes, and coordinating with risk owners in order that they are aware of risk management. This group includes Risk Management Committee, Risk Management Department and the Compliance Office.
- **3. 3rd Line of Defense:** those who are responsible for ensuring and reviewing the effectiveness of risk management (risk assurance/ internal audit). They are responsible for monitoring the assessment operation and summarizing the risk management process. This group consists of the Audit Committee and the Internal Audit Department.

Risk factors and risk management

This is the management and internal control of activities or processes to reduce a lost opportunity or errors / failures and to reduce the impacts that may occur in the future to an acceptable level. The impacts must be assessed, controlled and can be systematically audited. comply with the laws and international standards. The risk factors have been evaluated both internal and external and considered in conjunction with the Company's strategic planning in analyzing and assessing risks through consideration of executives in each department. In this connection, the focus is on major risks that may affect the risk appetite and the operating performance according to the company's goals as follows:

- Competitive
- Capital Adequacy Ratio (CAR) ratio
- Profitability
- Growth rate and market share
- Operations and services with information systems

Competitive risks

In today's business environment, competition comes from the adoption of new technologies to make customer service accessible anytime, anywhere. It's not just a strategy to meet the needs or just facilitate. Creating a good experience in using the service is another factor that companies focus

on both in terms of service for sale and after-sales service or policy service. The company is aware of the changes in such factors and has given importance to continually develop a business plan that determines the direction of the business plan to improve and review the adoption of information technology and digital as a part of driven the organization. Including prescribing measures and risk management plans to support the situation to be able to modify various strategies used in business operations both the development of the operation system, various service processes, including sales channel management. Developing new insurance schemes to increase the company's competitiveness.

Market risks and interest rate risks decreased and remained in low level

- 1. Interest rate risk is the risk that interest income from investments and the value of financial instruments will fluctuate due to changes in market interest rates. The Company exposure to interest rate risk relates primarily to its deposits at financial institutions, investments in securities and loans. In risk management, the Company has taken the investment risk and the appropriate investment return into consideration.
- 2. Volatility of money market and capital market; Interest rate risk is the risk that interest income from investments and the value of financial instruments will fluctuate due to changes in market interest rates. The Company exposure to interest rate risk relates primarily to its deposits at financial institutions, investments in securities and loans. In risk management, the Company has taken the investment risk and the appropriate investment return into consideration.
- 3. Foreign currency risk; The Company significant exposure to foreign currency risk is in respect of its investments in bonds and unit trusts which are denominated in foreign currencies. The Company utilizes cross currency swap and forward exchange contracts to manage the risk.
- 4. Investment Risks for Investors; It is a risk from the uncertainty of the return that investors will receive from holding securities or stocks of the company, which includes;
 - 4.1 The Company's stock price may rise or fall in a volatile fashion, which depends on several factors and some of them may be uncontrolled such as economic situation, regulatory or requirements changes, crisis situation such as the COVID-19 outbreak and financial crisis, etc. These factors could depress stock prices below what investors paid for or higher than their sold portions, or both so the investors may be at risk from the uncertainty of investment return that will not be as expected. In order to having no impact on investors, the Company has provided them the operating results, the essence and unique characteristics of life insurance business through various channels continuously.
 - 4.2 Risk of dividend payment that does not meet the investors' expectations. The company's affordability is subject to several factors such as operating results, rules and policies of regulators. If these factors affect the company's affordability of the annual dividends or interim dividends, or both, the Company may be at risk of maintaining its capital if it pays dividends at normal rate. In this connection, the Company may not be approved to pay dividends or dividends will be paid at a lower rate specified by the Company as not less than 25 percent of net profit.

The Company has managed the investment risk of securities holders with effective business operations and formulation of financial and other risk management policy, including closely monitoring economic situation, rules and policies of regulators and other related sectors so that the Company can prepare for adaptation and/or change quickly and in a timely manner. This is to ensure that the Company has a strong and stable financial position and can give investors the opportunity to receive good and consistent returns or dividends.

5. The prolonged low interest rates affect the profitability and the insurance product development. Interest rates is one of the main assumptions in setting the premium rates, evaluating

insurance reserves and capital adequacy ratio, prolonged low interest rates will affect the ability to pay contractual obligations, the maintenance of profitability, risk-based capital and the management of asset and liability correlation.

The Company manages this risk by establishing RBC working team to closely monitor, evaluate and report risk factors and Key Risk Indicators (KRI), including the review and revision of investment plans according to the situation such as asset allocation management, duration gap management while maintaining an acceptable level of investment return. The Company also regularly reviews the product pricing to reflect the current costs, and monitors the risks by using early warning system, sensitivity test and stress test.

Legal and compliance risks

Over the past year, the Company has been following up on changes in law, rules and regulations from government agencies. The Company has prepared and adjusted internal processes to be ready to comply with the legal changes such as the Personal Data Protection Act, 2019. The Company has prepared the operating systems, personnel and work procedures to comply with the enforcement of laws, including the Cyber Security Act, 2019, which set the relevant committees to establish a policy framework, management plan, monitoring control and reporting. For financial laws and relevant regulations, such as the International Financial Reporting Standards (IFRS), the Company has studied on the its effect as well as conducting studies on the impact of law and putting in place systems and simulation models to comply with laws enforcement in the future.

3.2 Asset and Liability Management Risk: ALM Risk

In order to reduce risk impacts, the Company has been managing the sensitivity of asset and liability value to the changes in interest rate within a similar level (Duration Matching). Duration gap is determined as a key risk indicator (KRI) and therefore, is regularly monitored along with the management of asset and liability cash flow matching, while still maintaining the risk appetite level of ALM risk level.

4. Significant and Predictable Insurance Risks that May Have an Impact on the Company's Finance, Reinsurance Risk Management, the Coherence of Capital Fund, Risks and Concentration of Risk

Risks may occur from underwriting risk processes. Major causes are insureds' risk factors and/or risk factors from external environments which are related to life insurance underwriting processes that may impact the Company's financial status, and cause losses to exceed the Company's estimated loss prediction which is product development assumptions and capital assessment. The Company has criteria and assessment guidelines of underwriting and life insureds' risks prioritization by considering both medical and non-medical risk factors. This is in order to be in line with the Company's risk appetite. The Company also takes into consideration, fairness to the insureds, agents, partnerships, profitability, and competing capacity by setting out clear operation guidelines in writing.

Underwriting is conducted in accordance with announcements, orders, sales rules, operation manuals, which are in line with or not prohibited by regulations and laws; under determined risk management plan, and subject to continuous assessment. The Company also reinsures by considering levels of sum insured as well as its retention limit, and sets the authority of high-level executives in approving underwriting by level, position, knowledge and experience of underwriters.

Insurance risk is a key risk factor in the Company's business operation and directly affects its financial status because in taking risk from customers, the Company assumes contractual obligations when the risk takes place. The Company then has planned for risk mitigation and stabilizing financial losses from unexpected high-value claims by transferring risks to reinsurers, who have financial strength with long-standing experience and are well

accepted in both domestic and international markets through reinsurance agreements on both automatic and facultative basis and by considering its own retention limit, risk premium rates and treaty conditions in accordance with the Company's experience in each type of products in order to manage costs. Outward reinsurance also helps increase the Company's underwriting capacity and supports its expansion into new markets which are risky and very complex by relying on reinsurer's experience in providing academic services and specialized technical consultation according to market needs and trends. In this connection, the Company has also been managing the credit risk of reinsurance partners and concentration risk in order to ensure that the risk transfer is properly managed and that the company can perform contractual obligations when obligations become due. Additionally, the performance of reinsurance arrangement has been regularly monitored and reinsurance strategies are also reviewed annually in response to changes in the market and the company's risk profile.

Overall, the Company has been exposed to insurance risk, which is lower than other risks as the Company's underwriting guideline and processes are consistent with the risk exposure, and the Company has mitigated insurance risk through strong reinsurers. Moreover, the movement of insurance risk has slightly changed so there is no significant impact on the Company's capital fund.

5. Values, Methodologies, and Assumptions for Evaluating Insurance Liabilities

Reserves for Long-term Insurance Contracts

Under account value basis, reserves for long-term insurance contracts are calculated with reference to net premium valuation method (NPV), which is an actuarial approach for estimating reserves, using the current assumptions (mortality rate, morbidity rate, and discount rate) or assumptions on the issued date, which reflect the best estimate at that time. Additional risk charge and standard deviation are also included.

Under appraisal value basis, reserves for long-term insurance contracts are calculated by using gross premium valuation method (this reserve is also used for calculating risk based capital). Gross premium valuation (GPV) is an actuarial approach for estimating reserves, using the current assumptions, which are the best estimate at that time and provision of adverse deviations (PAD) of that assumption, according to the OIC's regulations.

Reserves for Short-term Insurance Contracts

Reserves for short-term insurance contracts consist of loss reserves and outstanding claims-including premium reserves.

Loss Reserves and Outstanding Claims

Under account value basis, loss reserves and outstanding claims are the estimation of unpaid claims on reported dates, including incurred but not reported claims. This reflects the best estimation of reserves on reported dates based on historical data and company experience.

Under appraisal value basis, loss reserves and outstanding claims are calculated using the same method as that of accounting basis but with provision of adverse deviations (PAD) according to the OIC's regulations.

Premium reserves

Under account value basis, premium reserves are the higher value between unearned premium reserves (UPR) and unexpired risk reserve (URR). UPR is the amount of premium applicable to the portion of the remaining period, while URR is the best estimate of claims in the remaining period. Premium reserves are calculated before commission and brokerage.

Under appraisal value basis, premium reserves are calculated using the same method as that of accounting basis but with provision of adverse deviations (PAD) according to the OIC's regulation.

The Company's insurance liabilities are shown in table below.

Unit: Million Baht

Item	2021		2020	0
	Account value	Appraisal value	Account value	Appraisal value
Long-term technical reserves	287,771.59	304,461.95	282,407.30	318,935.99
Short-term technical reserves	1,965.97	1,722.93	1,745.39	1,508.53
Unpaid policy benefits	347.82	347.82	236.89	236.89
Due to insured	5,394.60	5,394.60	6,938.99	6,938.99

6. Company's Investment

Investment Policy

The Company has obligations and responsibilities for its long-term commitments to the policyholders. Therefore, the investment policy is emphasized on risk management aiming to prevent the Company's investment assets from depreciation, along with earning investment return at an acceptable level.

Objective

The Company has long-term commitments to the policyholders. In order to achieve the objective, we emphasize on Asset-Liability management by matching maturity of investment assets to liabilities arising from future obligations. Consequently, liquidity risk and interest rate risk are minimized.

Investment Process

The Company's investment process consists of 4 parts:

- 1. <u>Investment Diversification</u> In order to minimize investment risk, the Company diversifies its investment into various asset classes appropriately, focusing its investment in long-term debt securities to match financial obligations and ensuring that each of these asset classes and allocations complies with the rule regulated by OIC.
- 2. <u>Risk Management</u> As the Company strongly emphasizes the protection of investment asset principal, the Company focuses on investing in government bond and state-owned enterprise bond, both guaranteed and non-guaranteed by the Ministry of Finance. The rest of the portfolio, which is relatively small, is invested in more risky assets, such as equity, unit trust, and corporate debenture, in order to enhance investment return at an acceptable risk level.
- 3. <u>Selection Process</u> Rigorous and careful selection process will be carried out prior to investment in each financial asset. For government bond analysis, both domestic and global economic factors are taken into account to determine interest rate movement and level of bond yield. For more risky assets, such as equity and corporate debenture, both top-down and bottom-up analyses are conducted to ensure that the underlying securities are fundamentally suitable.

4. <u>Evaluation Process</u> Investment performance is tracked periodically for the purpose of adjusting portfolio allocation according to changing in market environment, and assuring that the investment is on plan.

Asset Valuation Methods Used for Preparation of Financial Statements

The Company uses different methods of asset valuation as follows:

Asset Class	Valuation methods
1. Bonds, debentures, promissory notes and bills of exchange issued by the government, central bank, state-owned enterprise, state organization or local governments in Thailand, both guaranteed and not guaranteed, issued in Thailand	Clean Price provided by ThaiBMA

- Note Appraisal value refers to assets and liabilities assessed under the Announcement of the Office Insurance Commission (OIC) on assets and liabilities appraisal for the purpose of overseeing the financial security of insurance companies and to ensure that the company is able to deliver its commitment to the policyholders.
 - Unit linked insurance policy is life insurance policy including life protection and investment in mutual funds the policy value of which depends on fund's NAV. Investment assets belong to policyholder not the company.
 - Universal life insurance policy is life insurance policy with separate investment saving element. Investment return depends on the company's investment performance with guaranteed minimum rate of return.

8. Capital Adequacy

Capital Management Policy and Objective

To ensure that the capital is within the Company's risk appetite, the Company has the assessment policy and stress test under Own Risk and Solvency Assessment guideline and the capital management plan in line with risk assessment and Early Warning System for major activities and significant risk factors.

Capital management processes

For regular monitoring and reviewing risks which will impact the operational targets, the Company determines measurements under assumptions that the capital has not been lower than capital adequacy ratio required by the Office of Insurance Commission, by testing risk factors such as interest rate, funds market and economy scenarios with value at risk (VaR).

For implementation according to situations, the Company will assess, monitor and test the sensitivity and stress of risk factors in response to risks as the capital management plan, source of funds and measurements appropriately and promptly. And, the Company has determined the roles and responsibilities of related unit functions and prepared unit functions' risk management plan in line with the Company's risk appetite level. It has also established the management and Risk Committee, reported to the Board of Directors, and communicated to employees for acknowledgement.

Unit: Million Baht
